According to Occupational Health Acts, Health and safety regulations should be considered in all of industrial process. OSHA requires employers to provide good condition for workers in terms of health and safety. Also no employees should have to give up good health in order to have job. So control measures/actions are known as the main part of Occupational health expertise.
• Air contaminants Control

Ventilation

Industrial Ventilation

Local Exhaust Vent.

Push / pull Vent.
Control Method Selection depends on:

- What pollutants you choose to measure
- What you know about toxicity of the pollutants (TLV, MSDS)
- When you measure pollutants
- Where you measure pollutants
- Costs
